Assignments and grading	4
Course policies	4
University policies and disclaimers	5
University Services	6

Welcome to CHEM 129B, Organic Chemistry Laboratory 2! This document contains all the information you need to know about the course. Read this document carefully, familiarize yourself with how the course works, and maintain that familiarity throughout the term. It is nearly 1,700 words for a reason. Almost all questions about the course that you might ask can be answered by referencing the syllabus.

## Changelog

This syllabus and schedule are subject to change in the event of extenuating circumstances. If you are absent from class, it is your responsibility to check on announcements made while you were absent. Changes and corrections are listed in the changelog below and will be announced on Canvas.

• 2020-06-03: Syllabus updated and published on Canvas

#### General information

- Course name and number: CHEM 129B (2 Units)
- Prerequisites: CHEM 128B with a grade of C or better (can be taken concurrently)
- Phone: (559) 278-2711<sup>1</sup>
- Email: hmuchalski@mail.fresnostate.edu<sup>2</sup>
- Office Hours: I will be available for consultations for 30 min after each class meeting. Walk-in office hours are Monday and Wednesday 12:00–01:00 pm. Additional consultation appointments can be scheduled through calendar function "Find Appointments" on Canvas.
- Techniques Reference Manual There are several options here. See Canvas for the full list of resources
- Canvas: The central repository for all course materials and information is our Canvas site, accessible through https://fresnostate.instructure.com/courses/24394. The Canvas site will house your grades, links to handouts, videos, and other materials.
- Personal computer: You will need a x86 class personal computer, either Windows of macOS that can run desktop applications. Mobile devices have potential to augment the learning experience, but are not capable to run the apps we will use. Refer to Canvas for the computer and software requirements.

#### **Course Learning Outcomes**

This course is organized into Modules and aims to help students achieve learning outcomes through online activities. Each module contains materials you need to complete the associated activities. Each course-level student learning outcome is aligned with department-level learning outcomes which are modeled after the standards set by the American Chemical Society.

Upon completion of this course students will be able to:

<sup>&</sup>lt;sup>1</sup>This is my campus office number which redirects to my personal cell phone. Calling me is the most direct way to reach me. Sometimes 3-minute phone call can solve a problem that multiple email exchanges cannot.

<sup>&</sup>lt;sup>2</sup>Please note that I typically check email between 11 am and 6 pm, Monday through Friday. Usually, my response time is *within 12 hours of reading the message*. We also have online course tools where you can ask questions to the entire class at any time, making it more likely to get a quick response.

- 1. Communicate the structure and properties of organic molecules using common drawing and naming conventions
- 2. Analyze chemical structures and reaction conditions to make and defend predictions about chemical transformations
- 3. Use online databases to find relevant research articles containing information such as physicochemical properties of organic molecules, synthetic procedures, and spectroscopic data.
- 4. Use software tools such as ChemDraw to draw chemical structures, reactions, and mechanisms
- 5. Use software tools such as MestReNova and Topspin to process raw NMR data
- 6. Plan a synthesis experiment by evaluating the information found in online databases and research articles
- 7. Analyze the results of an experiment and be able to identify sources of error and suggest improvements;
- 8. Interpret spectroscopic data of organic compounds to confirm the structure of organic compounds
- 9. Communicate the results of experiments to the instructor and peers in a written form (lab report)
- 10. Communicate the results of experiments to the instructor and peers in an oral or poster presentation

## **Department Student Learning Outcomes**

- 1. Students will apply their understanding of terminology, concepts, theories, and skills to solve problems by defining problems and research questions clearly, formulating testable hypotheses, designing and conducting experimental tests of hypotheses, analyzing and interpreting data, and drawing appropriate conclusions within professional ethical guidelines. (ACS Standards 7.1 & 7.6)
- 2. Students will demonstrate the ability to conduct laboratory work of high quality including handling chemicals and other laboratory hazards in a safe, ethical, and socially responsible manner, keeping accurate, clear, concise, and complete records of their laboratory work in a notebook, properly using standard laboratory equipment and instruments, and evaluating the reliability and significance of laboratory data, all within professional ethical guidelines. (ACS Standards 7.1, 7.3, 7.6)
- 3. Students will complete a literature search in one or more of the five chemical sub disciplines by using common literature search techniques and tools to find recent journal articles from the peer-reviewed literature, critically read these articles to extract relevant information, and communicate the significance of these articles in written or oral formats within professional ethical guidelines. (ACS Standards 7.2 & 7.6)
- 4. Students will demonstrate the ability to clearly and effectively communicate their scientific results and opinions using written formats while following professional style and format conventions within professional ethical guidelines. (ACS Standards 7.4 & 7.6)
- 5. Students will demonstrate the ability to clearly and effectively communicate their scientific results and opinions using oral formats while following professional style and format conventions within professional ethical guidelines. (ACS Standards 7.4 & 7.6)
- 6. Students will demonstrate the ability to function effectively in collaborative and group work

environments including the ability to work on a component of a larger project and connect work with previous results within professional ethical standards. (ACS Standard 7.5 & 7.6)

## **Course Modules**

- 1. Chemical Hazards and Risk Assessment
- 2. Journals and Scientific Databases
- 3. SciFinder Scholar
- 4. Managing References
- 5. Green Chemistry
- 6. Spectroscopy
- 7. Synthesis of Methyl Diantilis and its Derivatives
- 8. Greener Synthesis of Benzil
- 9. Stereochemistry of Reduction of Benzil with Sodium Borohydride
- 10. Structural Elucidation of Acetophenone Derivatives
- 11. Independent Project

## Assignments and grading

Table below lists categories of assignment and weights associated with each group.

Item	Value
Lab Safety	12%
Research Tools	8%
Quizzes & Homework	15%
Spectroscopy	15%
Experiments	36%
Independent Project	14%
TOTAL	100%

Grade brackets are imposed by course coordinator. In the past, the grading scale followed a pattern close to the following: A = 90-100, B 80-89, C 70-79; D 60-69; and F < 60.

## Course policies

## Technology issues when submitting work

For assignments submitted electronically, it is your responsibility to make sure they are submitted on time, through any means necessary, even if technology issues arise. If a tech issue arises, it is your responsibility to find another way to get it to me (for example, via an email attachment). Technology issues that are avoidable or resolved with a simple work-around will not be considered valid grounds for a deadline extension. For example, if you are trying to upload a Lab to Canvas and Canvas won't accept the file, you should try again later, use a different browser, or send the file as an email attach-

ment until you can upload it successfully.

## **Academic Dishonesty**

For most assignments you are allowed and encouraged to work with others. However, the final product that you submit for feedback must be the result of your own efforts. Therefore you may share ideas and strategies with others, but collaboration on the actual finished product you submit is not allowed. Your work is expected to be the product of your own thinking, written and explained in your own words with no parts of the work copied from external sources such as books or websites, and done clearly enough in your own mind that you could explain the work from start to finish if asked. Specifically, this excludes:

- copying work from another student;
- copying work from a website;
- paraphrasing work done by another student or from print or internet resources—i.e. putting it in your own words—without coming up with the main ideas and strategies yourself; and
- *allowing or enabling* another student to copy or paraphrase work that you did, even if you did the original work yourself.

Violation of this policy is considered "academic dishonesty" and carries with it strong punitive measures mandated by Fresno State, including possible automatic failure of the course or suspension from the university. For details, please see APM 235 by going to http://www.fresnostate.edu/aps/documents/apm/235.pdf.

You may feel tempted to academic dishonesty at some point in the semester. The work can be difficult, and many of you are under a lot of stress. If you are considering academic dishonesty, please STOP, take a breath, and remember that your classmates and I want you to succeed in the course. You are not alone, and you have a strong network in the class for getting help. The revision and resubmission policies mean that it's OK to turn in work that isn't perfect. There is no need to be academically dishonest! Just do your best on the work, and you'll have the chance to revise it later.

## Dropping the course after the census date

A *serious and compelling reason* is defined as an unexpected condition that is not present prior to enrollment in the course that unexpectedly arises and interferes with a student's ability to attend class meetings and/or complete course requirements. The reason must be acceptable to and verified by the instructor of record and the department chair. The condition must be stated in writing on the appropriate form. The student must provide documentation that substantiates the condition.

Failing or performing poorly in a class is not an acceptable "serious and compelling reason" within the University policy, nor is dissatisfaction with the subject matter, class or instructor.

# University policies and disclaimers

In addition to course policies, you are expected to be familiar with Academic Regulations described in the University Catalog as well as policies listed below.

Students with Disabilities: Upon identifying themselves to the instructor and the university, students with disabilities will receive reasonable accommodation for learning and evaluation. For more information, contact Services to Students with Disabilities in the Henry Madden Library, Room 1202 (278-2811).
